

FOR IMMEDIATE RELEASE
**REMITPRO ADDS BUNDLED PRICING TO ITS REMOTE DEPOSIT
CAPTURE SOLUTION**

Omaha, NE —December 17, 2008-RemitPro, a service bureau specializing in Remote Deposit Capture software announced today that it has added a new pricing option for its solution.

RemitPro is the first provider to bundle software, hardware and extended warranty/maintenance into a single, low monthly payment. Payments are fixed for a term of 24 or 36 months and can be utilized with any of the hardware offerings certified by RemitPro.

“We are really excited to be the first in the market to offer a fully bundled solution”, said Jana Waughn, President and CEO. “By giving customers payment options, it provides the flexibility that many customers need in order to move forward with Remote Deposit Capture.”

The bundled offering is made available alongside the traditional pricing option whereby customers purchase the check scanners upfront and pay a monthly fee based on the volume of transactions processed through the application. Remote Deposit Capture creates a compelling ROI whether customers choose to lease or buy; many existing RemitPro customers have enjoyed paybacks in less than 6 months. The new bundled pricing option enables customers to offset existing operating costs without the need for a capital expenditure. The low, fixed monthly payment provides a consistent, predictable expenditure for planning purposes.

RemitPro’s Remote Deposit Capture solution, eRemitPro is a leading-edge corporate accounts receivable application. Major features include desktop lockbox whereby customers can capture one or many checks to one or many coupons while maintaining the integrity of the transaction and balancing the items. eRemitPro boasts the ability to post into a variety of back office and general ledger accounting systems as a standard offering. In addition custom output files/native interfaces can be created by leveraging the existing architecture thus creating processing efficiencies throughout the accounts receivable process. Hierarchical reporting, web-based administration, and smart settlement routing based on MICR are some additional features that have been innovative and well-received.

“Market feedback indicated that flexibility in pricing options is important to customers. We are very pleased to be able to respond so quickly and swiftly to the needs of our prospective customers with innovative features and flexible pricing”, said Waughn.
