RemitPro Integrates Check Processing Software in Unisys SmartSource™ Series Check Scanners

Integration enhances SmartSource capabilities and provides financial institutions with advanced solution for image-based check processing

Omaha, NE July XX, 2008 – RemitPro, a service bureau specializing in Remote Deposit Capture, today announced the integration of its eRemitPro™ 4.0 program to work with Unisys SmartSource™ Series, the line of check scanners with industry-leading capabilities., offering clients an advanced, comprehensive solution for their check processing challenges.

RemitPro's latest Remote Deposit Capture solution, eRemitPro™ 4.0 converts checks into electronic transactions enabling companies to process payments electronically. Unisys SmartSource series is an advanced line of scanners that processes checks and other payment items remotely at faster speeds and in a more efficient and secure operating environment.

“RemitPro strives to provide our clients with Check21 solutions that work with the most advanced hardware available,” said Jana Waughn, President of RemitPro. “The integration of RemitPro’s solution with the Unisys SmartSource series resulted from client’s needs to solve the growing and changing challenges of check processing. Our software coupled with SmartSource scanners offers one of the fastest, most secure and efficient way to process checks.”

Corporations and merchants use SmartSource scanners and eRemitPro™ software to capture images of checks and remittance coupons as well as data such as the account number, dollar

amount and MICR line. eRemitPro™ then routes the check images to the client's bank electronically for deposit.

SmartSource series offers three models to suit any financial environment including small retail businesses with low check volumes to back-office capture to handle large volume of checks and other documents. SmartSource devices operate at industry-leading speeds to handle increasing volumes of check image exchange. Upfront, immediate image capture allows customers to more quickly identify item defects (e.g., a folded corner in a check image), save time in corrections, and help improve fraud detection. In addition, its "on-board intelligence" can process items across an Ethernet network independent of a local PC. On-board processing eliminates security risks by performing quality decisions, image security and digital signature – all at the time of capture.

About RemitPro

RemitPro is a technology provider focused on treasury management and risk management applications in a service bureau environment. RemitPro offers Remote Deposit Capture, Check21 and ACH solutions to facilitate cash receipt processing. RemitPro also offers comprehensive risk management for USA PATRIOT Act compliance through its modular RiskAlert solution. Modules include Identity Validation of U.S. consumers, Canadian consumers, businesses and institutions and Global Watch List screening.
